_________________________

## 3. Hot Work Requirements

A risk assessment is required to be completed before the commencement of hot work. The Permit Approver needs to verify that the following requirements can be met by the Permit Requestor as a minimum:

- All combustible materials located in the area will be stored in a manner that manages the risk of ignition.
- That a suitable process for managing emergencies has been established.
- Access to firefighting equipment is available and workers are trained to use fire fighting equipment.
- A mandatory fire watcher is to be appointed to oversee work at all times.

**Permit Requestor to sign once the permit requirements have been understood:**

_________________________

**Permit Approver to sign once satisfied that the minimum requirements outlined above can be met:**

_________________________

## 4. Energy Isolation

A risk assessment is required to be completed before the commencement of energy isolation work. The following requirements need to be catered for as a minimum:

- Work must be completed in accordance with UOW Electrical Safety Guidelines
- Ensure workgroup have the appropriate certification and training.
- Verify isolation is in place and ensure work group have locked or tagged the right equipment/board and that the workgroup are working on the correct equipment/part of the plant.
- The working area is to be barricaded and signed.
- Any persons affected by the isolation are to be notified.

**Permit Requestor to sign once the permit requirements have been understood:**

_________________________

**Permit Approver to sign once satisfied that the minimum requirements outlined above can be met:**

_________________________

## 5. Completion of Work

Outline the method that will be used by the Permit Approver to verify that the work site has been left in a safe condition after work has been completed – for example visual inspection.

____________________________________________________________________________________________________

By signing below the permit requestor and the permit approver are confirming that the work site has been verified as safe after the completion of the work. This includes the removal of danger locks or tags for energy isolation work.
