1 Introduction

The following document outlines the Roof Safety Survey (RSS) for Building 2 of the University of Wollongong located at Wollongong Campus Northfields Avenue Wollongong NSW 2522.

2 Purpose

This RSS is to be used as a general guideline to provide awareness and control measures for site personnel and contractors when accessing various roof areas. Personnel must make an assessment prior to accessing the roof. Should there be any potential for falls, all personnel must ensure the necessary fall prevention systems are utilised and operated in a “fall restraint” working mode. All ends users of Fall arrest equipment must be trained to a level of national recognition. All work practices and systems operations must be identified and documented in the risk assessment and safe work method statement.

3 Disclaimer

This document should be used as a general guide for roof access purposes only. Items detailed within this document were in situ at the time of inspection and may change. End users must use caution and evaluate the conditions as suitable to themselves.

Riverlands Roofing and Waterproofing (Louey Models Pty Ltd) accepts no responsibility for the actions of persons accessing these areas and or legislative compliance of fittings and fixtures of the site.

5 Risk Management

5.1 Risk Matrix

This risk assessment matrix below must be used reviewing in context with the University's [Risk Management Guidelines](#).

Step 1 – Consider the Consequences		Step 2 – Consider the Likelihood		Step 3 – Calculate the Risk					
What are the consequences of this incident occurring? Consider what <u>could reasonably</u> have happened as well as what actually happened. Look at the descriptions and choose the most suitable Consequence.		What is the likelihood of the consequence identified in step 1 happening? Consider this without new or interim controls in place. Look at the descriptions and choose the most suitable Likelihood.		1. Take step 1 rating and select the correct column 2. Take Step 2 rating and select the correct line 3. Circle the risk score where the two ratings cross on the matrix below. H = High, M = Medium, L = Low					
CONSEQUENCES		LIKELIHOOD							
Consequence	Description	Likelihood	Description		CONSEQUENCES				
					Minor	Moderate	Major	Severe	
Severe	Death or extensive injuries	Almost Certain	Is expected to occur in most circumstances	LIKELIHOOD	Almost Certain	M	M	H	H
Major	Medical treatment	Likely	Will probably occur in most circumstances		Likely	L	M	H	H
Moderate	First aid treatment	Possible	May occur at some time		Possible	L	L	M	H
Minor	Injury report, no treatment	Unlikely	May occur, but probably never will		Unlikely	L	L	M	M

5.2 Risk Control

Risk control is a method of managing the risk with the primary emphasis on controlling the hazards at source. For a risk that is assessed as “high”, steps should be taken immediately to minimize risk of injury. The method of ensuring that risks are controlled effectively is by using the “hierarchy of controls”.

The Hierarchy of Controls are:

Order No.	Control Type	Example
Firstly	Eliminate	Removing the hazard, eg taking a hazardous piece of equipment out of service.
Secondly	Substitute	Replacing a hazardous substance or process with a less hazardous one, eg substituting a hazardous substance with a non-hazardous substance.
Thirdly	Isolation	Isolating the hazard from the person at risk, eg using a guard or barrier.
Fourthly	Engineering	Redesign a process or piece of equipment to make it less hazardous.
Fifthly	Administrative	Adopting safe work practices or providing appropriate training, instruction or information.
Sixthly	Personal protective equipment	The use of personal protective equipment could include using gloves, glasses, earmuffs, aprons, safety footwear, dust masks.

For more information on risk management visit:

<https://www.uow.edu.au/about/services/safe-at-work/whs-framework>

5.3 Contractors Risk Assessment

The below tables have been populated by the University with known hazards that may be applicable for roof work.

All contractors are required to establish their own risk assessment and SWP/SWMS/etc specific to each task they perform, taking into account hazards that may not have been identified by the University.

Assessment of Hazards						
Hazard No.	Description of Activity/ Service Item	Description of Hazard (What has potential to cause injury or damage to property/environment?)	Current Controls (What is in place today that controls the risk? List any control measures already implemented)	Risk rating (With <u>current</u> controls in place)		
				Consequence	Likelihood	Risk

Risk Control						
Hazard No.	Additional Control Description (What should be done in the future to control the risk? What can be done to eliminate or further reduce the risk?)	Control Type (Elimination, Substitution, Isolation, Engineering, Administration, PPE)	Person Responsible	Risk rating (With <u>additional</u> controls in place)		
				Consequence	Likelihood	Risk

6 Roof Safety Survey Building 2

6.1 Building 2 General Information

Note: Before commencing any work obtain Roof Permit from Facilities Management Division

Building:

University of Wollongong Campus Building 2

Description:

Building 2 is a multi-storey building with a flat concrete roof surface that has a large number of services include air conditioning units, exposed pipe work roof ventilation ducts, antenna, fume cupboards and cooling tower with chemical hazards.

- Building 2 is also the access point for Building 4.

SafetyNet Risk Assessment Reference Number:

- UOW01886

Roof Access:

Main Roof Access:

- Access to the building's roof area is via the internal stairwell. Building 2's roof access door is located at the top of the stairwell (western facing).

Signage:

- Various restricted areas

Compliance Plates:

- No systems are on this building

Height of Building:

- Multi storey

Pitch:

- < 5 degrees

Roof Construction:

- Concrete construction

Structural Integrity:

- Sound

Vegetation:

- Yes (Western & Southern side have trees growing over the roof area)

Fall Arrest System:

System	Certification Status	Certification By
Various Anchor Points	N/A	N/A
Horizontal Lifelines	N/A	N/A

(End users must follow manufacturer's instructions and use compatible attachments)

Services:

- | | | |
|--|--|--|
| <input checked="" type="checkbox"/> Gutters | <input checked="" type="checkbox"/> Fume Cupboards | <input checked="" type="checkbox"/> Fiberglass Skylights |
| <input checked="" type="checkbox"/> A/C Units | <input type="checkbox"/> Telco Towers | <input checked="" type="checkbox"/> Pipework |
| <input checked="" type="checkbox"/> Ducts | <input type="checkbox"/> Satellite Dishes | <input checked="" type="checkbox"/> Cooling Tower |
| <input checked="" type="checkbox"/> Roof Ventilators | <input checked="" type="checkbox"/> Antenna | <input type="checkbox"/> Roof Top Solar Panels |

Existing Safety Systems:

- | | | |
|---|--|---|
| <input type="checkbox"/> Horizontal Lifelines | <input type="checkbox"/> Vertical Lifelines | <input checked="" type="checkbox"/> Walkway |
| <input type="checkbox"/> Anchor Points | <input checked="" type="checkbox"/> Handrail | <input type="checkbox"/> Parapets |

Work Activity & Frequency:

- Clean gutters/routine maintenance – 6 months
- Service A/C plant- monthly

6.2 Building 2 Safety Systems Aerial Photo Layout

The following aerial photo indicates access points and safety systems layout.

Legend:

MA Main Roof Access Door

 Cooling Tower Chemical Hazard

FL Fixed Ladder (Access to Building 4)

6.3 Building 2 Roof Photos

Main Roof

Building 2 internal staircase

Building 2 roof access door located at the top of the buildings internal staircase

Building 2 roof area with cooling tower chemical storage

Building 2 roof area with ducts and cooling tower and walkway

Building 2 roof area with fume cuboards

Building 2 roof area with

Building 2 roof area with exposed pipework & services

Building 2 roof area with ducts and exposed pipework

Building 2 roof area with fixed ladder access to Building 4

7 Program Evaluation

Conditions that might warrant a review of the guidelines on a more frequent basis would include:

- changes to the roof
- change in the relevant legislation or Australian Standards
- organisational needs or WHS Committee concern.
