1 Introduction

The following document outlines the Roof Safety Survey (RSS) for Building 9 of the University of Wollongong located at Wollongong Campus Northfields Avenue Wollongong NSW 2522.

2 Purpose

This RSS is to be used as a general guideline to provide awareness and control measures for site personnel and contractors when accessing various roof areas. Personnel must make an assessment prior to accessing the roof. Should there be any potential for falls, all personnel must ensure the necessary fall prevention systems are utilised and operated in a “fall restraint” working mode. All ends users of Fall arrest equipment must be trained to a level of national recognition. All work practices and systems operations must be identified and documented in the risk assessment and safe work method statement.

3 Disclaimer

This document should be used as a general guide for roof access purposes only. Items detailed within this document were in situ at the time of inspection and may change. End users must use caution and evaluate the conditions as suitable to themselves.

Riverlands Roofing and Waterproofing (Louey Models Pty Ltd) accepts no responsibility for the actions of persons accessing these areas and or legislative compliance of fittings and fixtures of the site.

- Main Roof

**Legend:**
- Primary Roof Point (EWP Access Only)
- Highlighted Zone Areas
- Non-Trafficable Awnings
5 Risk Management

5.1 Risk Matrix

This risk assessment matrix below must be used reviewing in context with the University’s Risk Management Guidelines.

![Risk Assessment Matrix]

**Step 1 - Consider the Consequences**
What are the consequences of this incident occurring? Consider what could reasonably have happened as well as what actually happened. Look at the descriptions and choose the most suitable consequence.

**Step 2 - Consider the Likelihood**
What is the likelihood of the consequence identified in step 1 happening? Consider this without new or interim controls in place. Look at the descriptions and choose the most suitable likelihood.

**Step 3 - Calculate the Risk**
1. Take step 1 rating and select the correct column
2. Take step 2 rating and select the correct line
3. Circle the risk score where the two ratings cross on the matrix below.

**CONSEQUENCES**
- Severe: Death or extensive injuries
- Major: Medical treatment
- Moderate: First aid treatment
- Minor: Injury report, no treatment

**LIKELIHOOD**
- Almost Certain: Is expected to occur in most circumstances
- Likely: Will probably occur in most circumstances
- Possible: May occur at some time
- Unlikely: May occur, but probably never will

**Control Type**
- Eliminate
- Substitute
- Isolation
- Engineering
- Administrative
- Personal protective equipment

For more information on risk management visit:

https://www.uow.edu.au/about/services/safe-at-work/whs-framework

5.2 Risk Control

Risk control is a method of managing the risk with the primary emphasis on controlling the hazards at source. For a risk that is assessed as “high”, steps should be taken immediately to minimize risk of injury. The method of ensuring that risks are controlled effectively is by using the “hierarchy of controls”.

The Hierarchy of Controls are:

<table>
<thead>
<tr>
<th>Order No.</th>
<th>Control Type</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firstly</td>
<td>Eliminate</td>
<td>Removing the hazard, eg taking a hazardous piece of equipment out of service.</td>
</tr>
<tr>
<td>Secondly</td>
<td>Substitute</td>
<td>Replacing a hazardous substance or process with a less hazardous one, eg substituting a hazardous substance with a non-hazardous substance.</td>
</tr>
<tr>
<td>Thirdly</td>
<td>Isolation</td>
<td>Isolating the hazard from the person at risk, eg using a guard or barrier.</td>
</tr>
<tr>
<td>Fourthly</td>
<td>Engineering</td>
<td>Redesign a process or piece of equipment to make it less hazardous.</td>
</tr>
<tr>
<td>Fifthly</td>
<td>Administrative</td>
<td>Adopting safe work practices or providing appropriate training, instruction or information.</td>
</tr>
<tr>
<td>Sixthly</td>
<td>Personal protective equipment</td>
<td>The use of personal protective equipment could include using gloves, glasses, earmuffs, aprons, safety footwear, dust masks.</td>
</tr>
</tbody>
</table>
5.3 Contractors Risk Assessment

The below tables have been populated by the University with known hazards that may be applicable for roof work. All contractors are required to establish their own risk assessment and SWP/SWMS/etc specific to each task they perform, taking into account hazards that may not have been identified by the University.

### Assessment of Hazards

<table>
<thead>
<tr>
<th>Hazard No.</th>
<th>Description of Activity/Service Item</th>
<th>Description of Hazard (What has potential to cause injury or damage to property/environment?)</th>
<th>Current Controls (What is in place today that controls the risk? List any control measures already implemented)</th>
<th>Risk rating (With current controls in place)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Consequence</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Risk Control

<table>
<thead>
<tr>
<th>Hazard No.</th>
<th>Additional Control Description (What should be done in the future to control the risk? What can be done to eliminate or further reduce the risk?)</th>
<th>Control Type (Elimination, Substitution, Isolation, Engineering, Administration, PPE)</th>
<th>Person Responsible</th>
<th>Risk rating (With additional controls in place)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>Person Responsible</td>
<td>Consequence</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
6 Roof Safety Survey Building 9

6.1 Building 9 General Information

*Note: Before commencing any work obtain Roof Permit from Facilities Management Division*

**Building:**
University of Wollongong Campus Building 9

**Description:**
Multi storey low pitched metal roof with solar panels and non-trafficable canopy awnings.

**SafetyNet Risk Assessment Reference Number:**
- UOW01615

**Roof Access:**
Roof access is from Elevated Work Platform only. Consideration must be made of AS 2550.10 – 2006 section 5.9 prior to any access of the roof.

**Main Roof Access:** EWP ACCESS ONLY
- Access to the main roof is via loading dock at the front of the building. A yellow line marking on the loading dock ground indicates the required EWP position to meet roof platform (EWP to not exceed this line). The roof gutter extends 1900mm from building wall.
- The EWP must extend to meet the roof platform, when extended users MUST be connected to the EWP by a twin tailed lanyard and safety harness prior to collapsing the EWP handrail.
- Before transferring from the EWP to the roof platform users must retrieve the anchor strop from the roof with a long arm and hook. Users must connect to the anchor strop with second section of the twin tailed lanyard to safety harness prior to disconnection from EWP

For a visual guide to accessing the roof via EWP see section EWP Roof Access Process

**Signage:**
- Various restricted areas

**Compliance Plates:**
- Data Plate for Lifelines & Anchor point data tags

**Height of Building:**
- Multi storey

**Pitch:**
- < 5 degrees

**Roof Construction:**
- Metal

**Structural Integrity:**
- Sound
Vegetation:
- No

Fall Arrest System:

<table>
<thead>
<tr>
<th>System</th>
<th>Certification Status</th>
<th>Certification By</th>
</tr>
</thead>
<tbody>
<tr>
<td>Various Anchor Points</td>
<td>Current</td>
<td>Riverlands Roofing</td>
</tr>
</tbody>
</table>

*(End users must follow manufacturer’s instructions and use compatible attachments)*

Services:
- Gutters
- A/C Units
- Ducts
- Roof Ventilators
- Fume Cupboards
- Telco Towers
- Satellite Dishes
- Antenna
- Fiberglass Skylights
- Pipework
- Cooling Tower
- Roof Top Solar Panels

Existing Safety Systems:
- Horizontal Lifelines
- Anchor Points
- Vertical Lifelines
- Handrail
- Walkway
- Parapets

Work Activity & Frequency:
- Clean gutters/routine maintenance – 6 months
- Service A/C plant - monthly
6.2 Building 9 Safety Systems Aerial Photo Layout

The following aerial photo indicates access points and safety systems layout.

**Legend:**

- **EWP**  Roof Access EWP Access Only
- **Anchor Point**
- **Lifeline**
- **Non-Trafficable Awning**

### 6.4 EWP Roof Access Process

<table>
<thead>
<tr>
<th><img src="image1.jpg" alt="Image" /></th>
<th><img src="image2.jpg" alt="Image" /></th>
<th><img src="image3.jpg" alt="Image" /></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Line marking to loading dock ground. Roof limit indicator. Position for EWP to meet roof platform. Gutter is 1900mm from building wall</strong></td>
<td><strong>Location of EWP in loading dock. Platform edge of EWP to not exceed line on ground</strong></td>
<td><strong>EWP clearance of gutter</strong></td>
</tr>
<tr>
<td><strong>EWP extended to meet roof platform</strong></td>
<td><strong>EWP handrail must not be collapsed until users are connected to the EWP with twin tailed lanyard and safety harness prior to collapsing handrail</strong></td>
<td><strong>Roof anchor strop to be retrieved with long arm and hook from roof. Users must connect to the anchor strop with second section of the twin tailed lanyard to safety harness prior to disconnection from EWP</strong></td>
</tr>
<tr>
<td><strong>Transfer to safe working area from EWP</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
7 Program Evaluation

Conditions that might warrant a review of the guidelines on a more frequent basis would include:

- changes to the roof
- change in the relevant legislation or Australian Standards
- organisational needs or WHS Committee concern.

11 Appendix A: Sample Images

Before contractors use any Fall Arrest System (lifeline or Anchor point) users must complete the following:

- Locate the fall arrest systems data plate or data tag.
- Validate that the system is current and that a yearly certification has been completed.
- Complete a personal visual & physical inspection of the system.
- Users must never exceed the MAX LOAD or USERS of the system.

Fall Arrest System Data Plate

Anchor Point Data Tag
