1 Introduction

The following document outlines the Roof Safety Survey (RSS) for Building 28 of the University of Wollongong located at Wollongong Campus Northfields Avenue Wollongong NSW 2522.

2 Purpose

This RSS is to be used as a general guideline to provide awareness and control measures for site personnel and contractors when accessing various roof areas. Personnel must make an assessment prior to accessing the roof. Should there be any potential for falls, all personnel must ensure the necessary fall prevention systems are utilised and operated in a “fall restraint” working mode. All ends users of Fall arrest equipment must be trained to a level of national recognition. All work practices and systems operations must be identified and documented in the risk assessment and safe work method statement.

3 Disclaimer

This document should be used as a general guide for roof access purposes only. Items detailed within this document were in situ at the time of inspection and may change. End users must use caution and evaluate the conditions as suitable to themselves.

Riverlands Roofing and Waterproofing (Louey Models Pty Ltd) accepts no responsibility for the actions of persons accessing these areas and or legislative compliance of fittings and fixtures of the site.

- Roof Access Door
- **FL** Fixed Ladder Upper Roof Access
5 Risk Management

5.1 Risk Matrix

This risk assessment matrix below must be used reviewing in context with the University’s Risk Management Guidelines.

<table>
<thead>
<tr>
<th>CONSEQUENCES</th>
<th>LIKELIHOOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Severe</td>
<td>Almost Certain</td>
</tr>
<tr>
<td>Major</td>
<td>Likely</td>
</tr>
<tr>
<td>Moderate</td>
<td>Possible</td>
</tr>
<tr>
<td>Minor</td>
<td>Unlikely</td>
</tr>
</tbody>
</table>

- **Step 1 - Consider the Consequences**: What are the consequences of this incident occurring? Consider what could reasonably have happened as well as what actually happened. Look at the descriptions and choose the most suitable Consequence.
- **Step 2 - Consider the Likelihood**: What is the likelihood of the consequence identified in step 1 happening? Consider this without any new or interim controls in place. Look at the descriptions and choose the most suitable Likelihood.
- **Step 3 - Calculate the Risk**: 1. Take step 1 rating and select the correct column. 2. Take step 2 rating and select the correct line. 3. Circle the risk score where the two ratings cross on the matrix below.

<table>
<thead>
<tr>
<th>CONSEQUENCES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minor</td>
</tr>
<tr>
<td>Moderate</td>
</tr>
<tr>
<td>Major</td>
</tr>
<tr>
<td>Severe</td>
</tr>
</tbody>
</table>

5.2 Risk Control

Risk control is a method of managing the risk with the primary emphasis on controlling the hazards at source. For a risk that is assessed as “high”, steps should be taken immediately to minimize risk of injury. The method of ensuring that risks are controlled effectively is by using the “hierarchy of controls”.

The Hierarchy of Controls are:

<table>
<thead>
<tr>
<th>Order No.</th>
<th>Control Type</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firstly</td>
<td>Eliminate</td>
<td>Removing the hazard, eg taking a hazardous piece of equipment out of service.</td>
</tr>
<tr>
<td>Secondly</td>
<td>Substitute</td>
<td>Replacing a hazardous substance or process with a less hazardous one, eg substituting a hazardous substance with a non-hazardous substance.</td>
</tr>
<tr>
<td>Thirdly</td>
<td>Isolation</td>
<td>Isolating the hazard from the person at risk, eg using a guard or barrier.</td>
</tr>
<tr>
<td>Fourthly</td>
<td>Engineering</td>
<td>Redesign a process or piece of equipment to make it less hazardous.</td>
</tr>
<tr>
<td>Fifthly</td>
<td>Administrative</td>
<td>Adopting safe work practices or providing appropriate training, instruction or information.</td>
</tr>
<tr>
<td>Sixthly</td>
<td>Personal protective equipment</td>
<td>The use of personal protective equipment could include using gloves, glasses, earmuffs, aprons, safety footwear, dust masks.</td>
</tr>
</tbody>
</table>

### 5.3 Contractors Risk Assessment

The below tables have been populated by the University with known hazards that may be applicable for roof work.

All contractors are required to establish their own risk assessment and SWP/SWMS/etc specific to each task they perform, taking into account hazards that may not have been identified by the University.

<table>
<thead>
<tr>
<th>Hazard No.</th>
<th>Description of Activity/Service Item</th>
<th>Description of Hazard (What has potential to cause injury or damage to property/environment?)</th>
<th>Current Controls (What is in place today that controls the risk? List any control measures already implemented)</th>
<th>Risk rating (With current controls in place)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Hazard No.</th>
<th>Additional Control Description (What should be done in the future to control the risk? What can be done to eliminate or further reduce the risk?)</th>
<th>Control Type (Elimination, Substitution, Isolation, Engineering, Administration, PPE)</th>
<th>Person Responsible</th>
<th>Risk rating (With additional controls in place)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
6 Roof Safety Survey Building 28

6.1 Building 28 General Information

Note: Before commencing any work obtain Roof Permit from Facilities Management Division. Minimum 24 hours notice must be provided to building 28 management to arrange access with FMD.

Building:
University of Wollongong Campus Building 28

Description:
Multi storey low pitched metal roof of various roof heights and services including solar panels, air conditioning units, roof ventilation and a large glass skylight.

SafetyNet Risk Assessment Reference Number:
- UOW 01619

Roof Access:

Main Roof Access:
- Access to the main roof is via the buildings internal staircase. Take the stairs to level 1 locate the door marked (S3) swipe card is required for access to the plant room. Locate the fixed ladder and landing for the roof access door.

Upper Roof Access:
- Access to the upper roof is via the main roof area a fixed ladder is provided.

Signage:
- Various restricted areas

Compliance Plates:
- Data Plate for Lifelines & Anchor point data tags

Height of Building:
- Multi storey

Pitch:
- < 5 degrees

Roof Construction:
- Metal
Structural Integrity:

- Sound

Vegetation:

- No

Fall Arrest System:

<table>
<thead>
<tr>
<th>System</th>
<th>Certification Status</th>
<th>Certification By</th>
</tr>
</thead>
<tbody>
<tr>
<td>Various Anchor Points</td>
<td>Current</td>
<td>Riverlands Roofing</td>
</tr>
<tr>
<td>Horizontal Lifelines Vertical Lifeline (Manufacturer’s User Manual in link below)</td>
<td>Current</td>
<td>Riverlands Roofing</td>
</tr>
</tbody>
</table>

(End users must follow manufacturer’s instructions and use compatible attachments)

Services:

- ☒ Gutters
- ☐ Fume Cupboards
- ☒ Glass Skylights
- ☒ A/C Units
- ☐ Telco Towers
- ☐ Pipework
- ☐ Ducts
- ☐ Satellite Dishes
- ☐ Cooling Tower
- ☐ Roof Ventilators
- ☐ Antenna
- ☒ Roof Top Solar Panels

Existing Safety Systems:

- ☒ Horizontal Lifelines
- ☐ Vertical Lifelines
- ☐ Walkway
- ☒ Anchor Points
- ☐ Handrail
- ☐ Parapets

Work Activity & Frequency:

- Clean gutters/routine maintenance – 6 months
- Service A/C plant- monthly
6.2 Building 28 Safety Systems Aerial Photo Layout

The following aerial photo indicates access points and safety systems layout.

Legend:

7 Program Evaluation

Conditions that might warrant a review of the guidelines on a more frequent basis would include:

- changes to the roof
- change in the relevant legislation or Australian Standards
- organisational needs or WHS Committee concern.

11 Appendix A: Sample Images

Before contractors use any Fall Arrest System (lifeline or Anchor point) users must complete the following:

- Locate the fall arrest systems data plate or data tag.
- Validate that the system is current and that a yearly certification has been completed.
- Complete a personal visual & physical inspection of the system.
- Users must never exceed the MAX LOAD or USERS of the system.

Fall Arrest System Data Plate

Anchor Point Data Tag
