1 Introduction

The following document outlines the Roof Safety Survey (RSS) for Building 41 of the University of Wollongong located at Wollongong Campus Northfields Avenue Wollongong NSW 2522.

2 Purpose

This RSS is to be used as a general guideline to provide awareness and control measures for site personnel and contractors when accessing various roof areas. Personnel must make an assessment prior to accessing the roof. Should there be any potential for falls, all personnel must ensure the necessary fall prevention systems are utilised and operated in a “fall restraint” working mode. All ends users of Fall arrest equipment must be trained to a level of national recognition. All work practices and systems operations must be identified and documented in the risk assessment and safe work method statement.

3 Disclaimer

This document should be used as a general guide for roof access purposes only. Items detailed within this document were in situ at the time of inspection and may change. End users must use caution and evaluate the conditions as suitable to themselves.

Riverlands Roofing and Waterproofing (Louey Models Pty Ltd) accepts no responsibility for the actions of persons accessing these areas and or legislative compliance of fittings and fixtures of the site.
4 Building 41 Roof Area Aerial Photo Zone Layout

Roof Zones:

- South East Wing Roof
- South West Wing Roof
- North Wing Roof
- Foyer Roof

Access Points:

- South East Wing Roof Access Door
- South East Wing Fixed Staircase Access
- South West Wing Roof Access Door
- North Wing Roof Access Door
- Foyer Roof Access Door
5 Risk Management

5.1 Risk Matrix

This risk assessment matrix below must be used reviewing in context with the University’s Risk Management Guidelines.

<table>
<thead>
<tr>
<th>Consequence</th>
<th>Description</th>
<th>Likelihood Description</th>
<th>Likelihood</th>
</tr>
</thead>
<tbody>
<tr>
<td>Severe</td>
<td>Death or extensive injuries</td>
<td>Almost Certain</td>
<td>M</td>
</tr>
<tr>
<td>Major</td>
<td>Medical treatment</td>
<td>Likely</td>
<td>M</td>
</tr>
<tr>
<td>Moderate</td>
<td>First aid treatment</td>
<td>Possible</td>
<td>L</td>
</tr>
<tr>
<td>Minor</td>
<td>Injury report, no treatment</td>
<td>Unlikely</td>
<td>L</td>
</tr>
</tbody>
</table>

For more information on risk management visit:

https://www.uow.edu.au/about/services/safe-at-work/whs-framework

5.2 Risk Control

Risk control is a method of managing the risk with the primary emphasis on controlling the hazards at source. For a risk that is assessed as “high”, steps should be taken immediately to minimize risk of injury. The method of ensuring that risks are controlled effectively is by using the “hierarchy of controls”.

The Hierarchy of Controls are:

<table>
<thead>
<tr>
<th>Order No.</th>
<th>Control Type</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firstly</td>
<td>Eliminate</td>
<td>Removing the hazard, eg taking a hazardous piece of equipment out of service.</td>
</tr>
<tr>
<td>Secondly</td>
<td>Substitute</td>
<td>Replacing a hazardous substance or process with a less hazardous one, eg substituting a hazardous substance with a non-hazardous substance.</td>
</tr>
<tr>
<td>Thirdly</td>
<td>Isolation</td>
<td>Isolating the hazard from the person at risk, eg using a guard or barrier.</td>
</tr>
<tr>
<td>Fourthly</td>
<td>Engineering</td>
<td>Redesign a process or piece of equipment to make it less hazardous.</td>
</tr>
<tr>
<td>Fifthly</td>
<td>Administrative</td>
<td>Adopting safe work practices or providing appropriate training, instruction or information.</td>
</tr>
<tr>
<td>Sixthly</td>
<td>Personal protective equipment</td>
<td>The use of personal protective equipment could include using gloves, glasses, earmuffs, aprons, safety footwear, dust masks.</td>
</tr>
</tbody>
</table>

For more information on risk management visit:

https://www.uow.edu.au/about/services/safe-at-work/whs-framework
5.3 Contractors Risk Assessment

The below tables have been populated by the University with known hazards that may be applicable for roof work.

All contractors are required to establish their own risk assessment and SWP/SWMS/etc specific to each task they perform, taking into account hazards that may not have been identified by the University.

<table>
<thead>
<tr>
<th>Hazard No.</th>
<th>Description of Activity/Service Item</th>
<th>Description of Hazard (What has potential to cause injury or damage to property/environment?)</th>
<th>Current Controls (What is in place today that controls the risk? List any control measures already implemented)</th>
<th>Risk rating (With current controls in place)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Consequence</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Hazard No.</th>
<th>Additional Control Description (What should be done in the future to control the risk? What can be done to eliminate or further reduce the risk?)</th>
<th>Control Type (Elimination, Substitution, Isolation, Engineering, Administration, PPE)</th>
<th>Person Responsible</th>
<th>Risk rating (With additional controls in place)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Consequence</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6 Roof Safety Survey Building 41

6.1 Building 41 General Information

Note: Before commencing any work obtain Roof Permit from Facilities Management Division

Building:
University of Wollongong Campus Building 41

Description:
Multi storey buildings with several wings, roof construction consists of concrete / concrete with loose gravel surface and metal roof areas with high pitched dome shaped external plantrooms. Services include air conditioning units, satellite dish, radio frequency hazard, ducts, skylights, roof ventilation, fume cupboards, exhaust stacks and exposed pipework.

SafetyNet Risk Assessment Reference Number:
 UOW01596

Roof Access:

South East Wing Roof Access:
 Access to the South East Wing roof area is via the South East Wing internal stairwell (4) located near room (338). The roof access door is located at the top of the stairwell. A fixed metal staircase located on the South East Wing leads to the raised services platform.

South West Wing Roof Access:
 Access to the South West Wing roof area is via the South Wing internal stairwell (6) located near room (170). The roof access door is located at the top of the stairwell.

North Wing Roof Access:
 Access to the North Wing roof area is via the North Wing internal stairwell (2) located near the main reception. The roof access door is located at the top of the stairwell.

Foyer Roof Access:
 Access to the Foyer Roof is via the North Wing building internal stairwell (1) level 3. The Foyer Roof access door is located within room (326).

Signage:
 Various restricted areas

Compliance Plates:
 Data Plate for Lifelines & Anchor point data tags

Height of Building:
 Multi storey

Pitch:
 < 5 degrees
Roof Construction:
- Concrete & Metal

Structural Integrity:
- Sound

Vegetation:
- Yes (Building has trees growing over the roof area)

Fall Arrest System:

<table>
<thead>
<tr>
<th>System</th>
<th>Certification Status</th>
<th>Certification By</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anchor Points</td>
<td>Current</td>
<td>Riverlands Roofing</td>
</tr>
<tr>
<td>Horizontal Lifelines SALA Evolution</td>
<td>Current</td>
<td>Riverlands Roofing</td>
</tr>
<tr>
<td>(Manufacturer’s User Manual in link below)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(End users must follow manufacturer’s instructions and use compatible attachments)

Services:
- Gutters
- A/C Units
- Ducts
- Roof Ventilators
- Fume Cupboards
- Radio Frequency Hazard
- Satellite Dishes
- Antenna
- Fiberglass Skylights
- Pipework
- Cooling Tower
- Roof Top Solar Panels

Existing Safety Systems:
- Horizontal Lifelines
- Anchor Points
- Vertical Lifelines
- Handrail
- Walkway
- Parapets

Work Activity & Frequency:
- Clean gutters/routine maintenance – 6 months
- Service A/C plant- monthly
6.2 Building 41 Safety Systems Aerial Photo Layout

The following aerial photo indicates access points and safety systems layout.

7  Program Evaluation

Conditions that might warrant a review of the guidelines on a more frequent basis would include:

- changes to the roof
- change in the relevant legislation or Australian Standards
- organisational needs or WHS Committee concern.

11 Appendix A: Sample Images

Before contractors use any Fall Arrest System (lifeline or Anchor point) users must complete the following:

- Locate the fall arrest systems data plate or data tag.
- Validate that the system is current and that a yearly certification has been completed.
- Complete a personal visual & physical inspection of the system.
- Users must never exceed the MAX LOAD or USERS of the system.

Fall Arrest System Data Plate

Anchor Point Data Tag
